FARM- TO-TABLE HOTELS

Speaker

Jeffery Smith

Vice President Sustainability
Six Senses Hotels Resorts Spas

An expert in sustainability who draws on a decade of experience launching community-based tourism programs, capacity building and facilitating connections between travelers, indigenous peoples, and the natural world.

SIX SENSES

HOTELS RESORTS SPAS

FARM TO TABLE

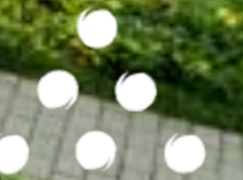

OUR VISION

**Helping people reconnect with themselves,
others and the world around them**

SIX SENSES LANDSCAPING

WASTE MANAGEMENT

Waste Sorting Stations

WOOD REPURPOSING

We repurpose or upcycle our leftover wood from renovations or other sources, and turn it into something useful

UPCYCLING

COMPOSTING

On-site composting supports waste diversion from landfills and gives us quality compost which is necessary to grow high quality foods in our gardens or farms. Our aim is zero purchase of fertilizer or plant soil in operations.

Effective Microorganism (EM) Production

We make our own effective microorganism (EM) on-site from food scraps. Depending on the inputs, it is used either for cleaning purposes, improving plant growth, or maintaining healthy compost.

GARDENS

Coconut Oil Production

Coconut Palm Sugar Production

Date Harvest

Date Palms line resort roads

Annual date harvest festival celebrated with Guests and local community

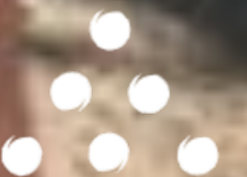

Another succesful date harvest season!

Date harvesting was in full swing over the summer, and we harvested over 14 tons of produce over seven different varieties. We then cold-press them into Date Syrup and then ferment the syrup to make date vinegar. We even invited the host to climb the trees with our landscaping team to see how it's done.

Charcoal

Tree trimmings and branches are repurposed into bio charcoal, activated charcoal or regular charcoal

Natural Insecticide

Wood vinegar is the byproduct of charcoal production. When diluted in water, it produces a natural insecticide that can be used in our gardens.

Charcoal

Natural Insecticide

GARDENS

GARDEN

Garden Beds

Garden beds provide fresh herbs, vegetables, and fruits for hosts and guests. For use in F&B, Spa, and Landscaping.

Chef's Garden

The chef's garden is used to host events or cooking classes. A great space to educate guests and hosts!

eat

WITH SIX SENSES

Eat With Six Senses represents another pillar of the Six Senses Integrated Wellness philosophy and approach to food and drink. It is based on the guiding principles of:

- Natural ingredients
- Local and sustainable
- Less is more

It helps guests to reconnect with food safe in the knowledge that it's good for them, and good for the world around them.

Gr̥w

WITH SIX SENSES

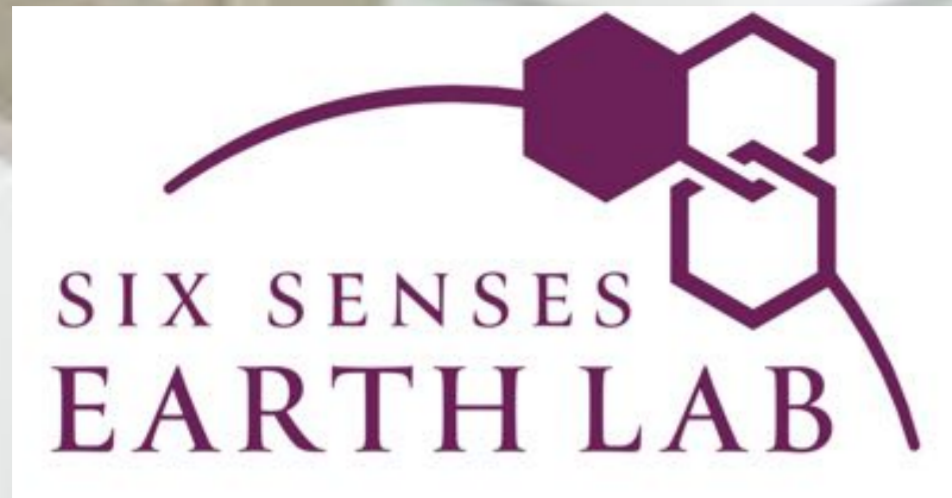

Each resort features a dedicated kids' venue which takes younger guests through fun and educational programs focused on six dimensions of wellness – spiritual, environmental, emotional, social, physical and intellectual.

We call it *Grow With Six Senses*.

The goal is to get kids from 5 to 12 years old involved in engaging and interactive activities. From hands-on cooking classes to making spa products, learning local dances and engaging with nature, each resort celebrates their unique location, culture and heritage.

Farmhouse

The farmhouse provides an off-site location for guests to participate in numerous activities. The farm consists of everything found in the garden - and more!

Mushroom Hut

Copyright 2020 Six Senses Hotels Resorts Spas | www.sixsenses.com

We grow our own mushrooms to reduce costs, and also because they taste best when they are harvested and immediately consumed

Worm Villa

Worms are great for loosening up soil and supporting the decomposition of compost.

The Worm Villa is a fun & quirky feature for guests to engage with.

Bug Hotel

The bug hotel provides a home for insects to sleep in during the wintertime. They wake up during the spring to lay eggs and sweep plants clean of mites.

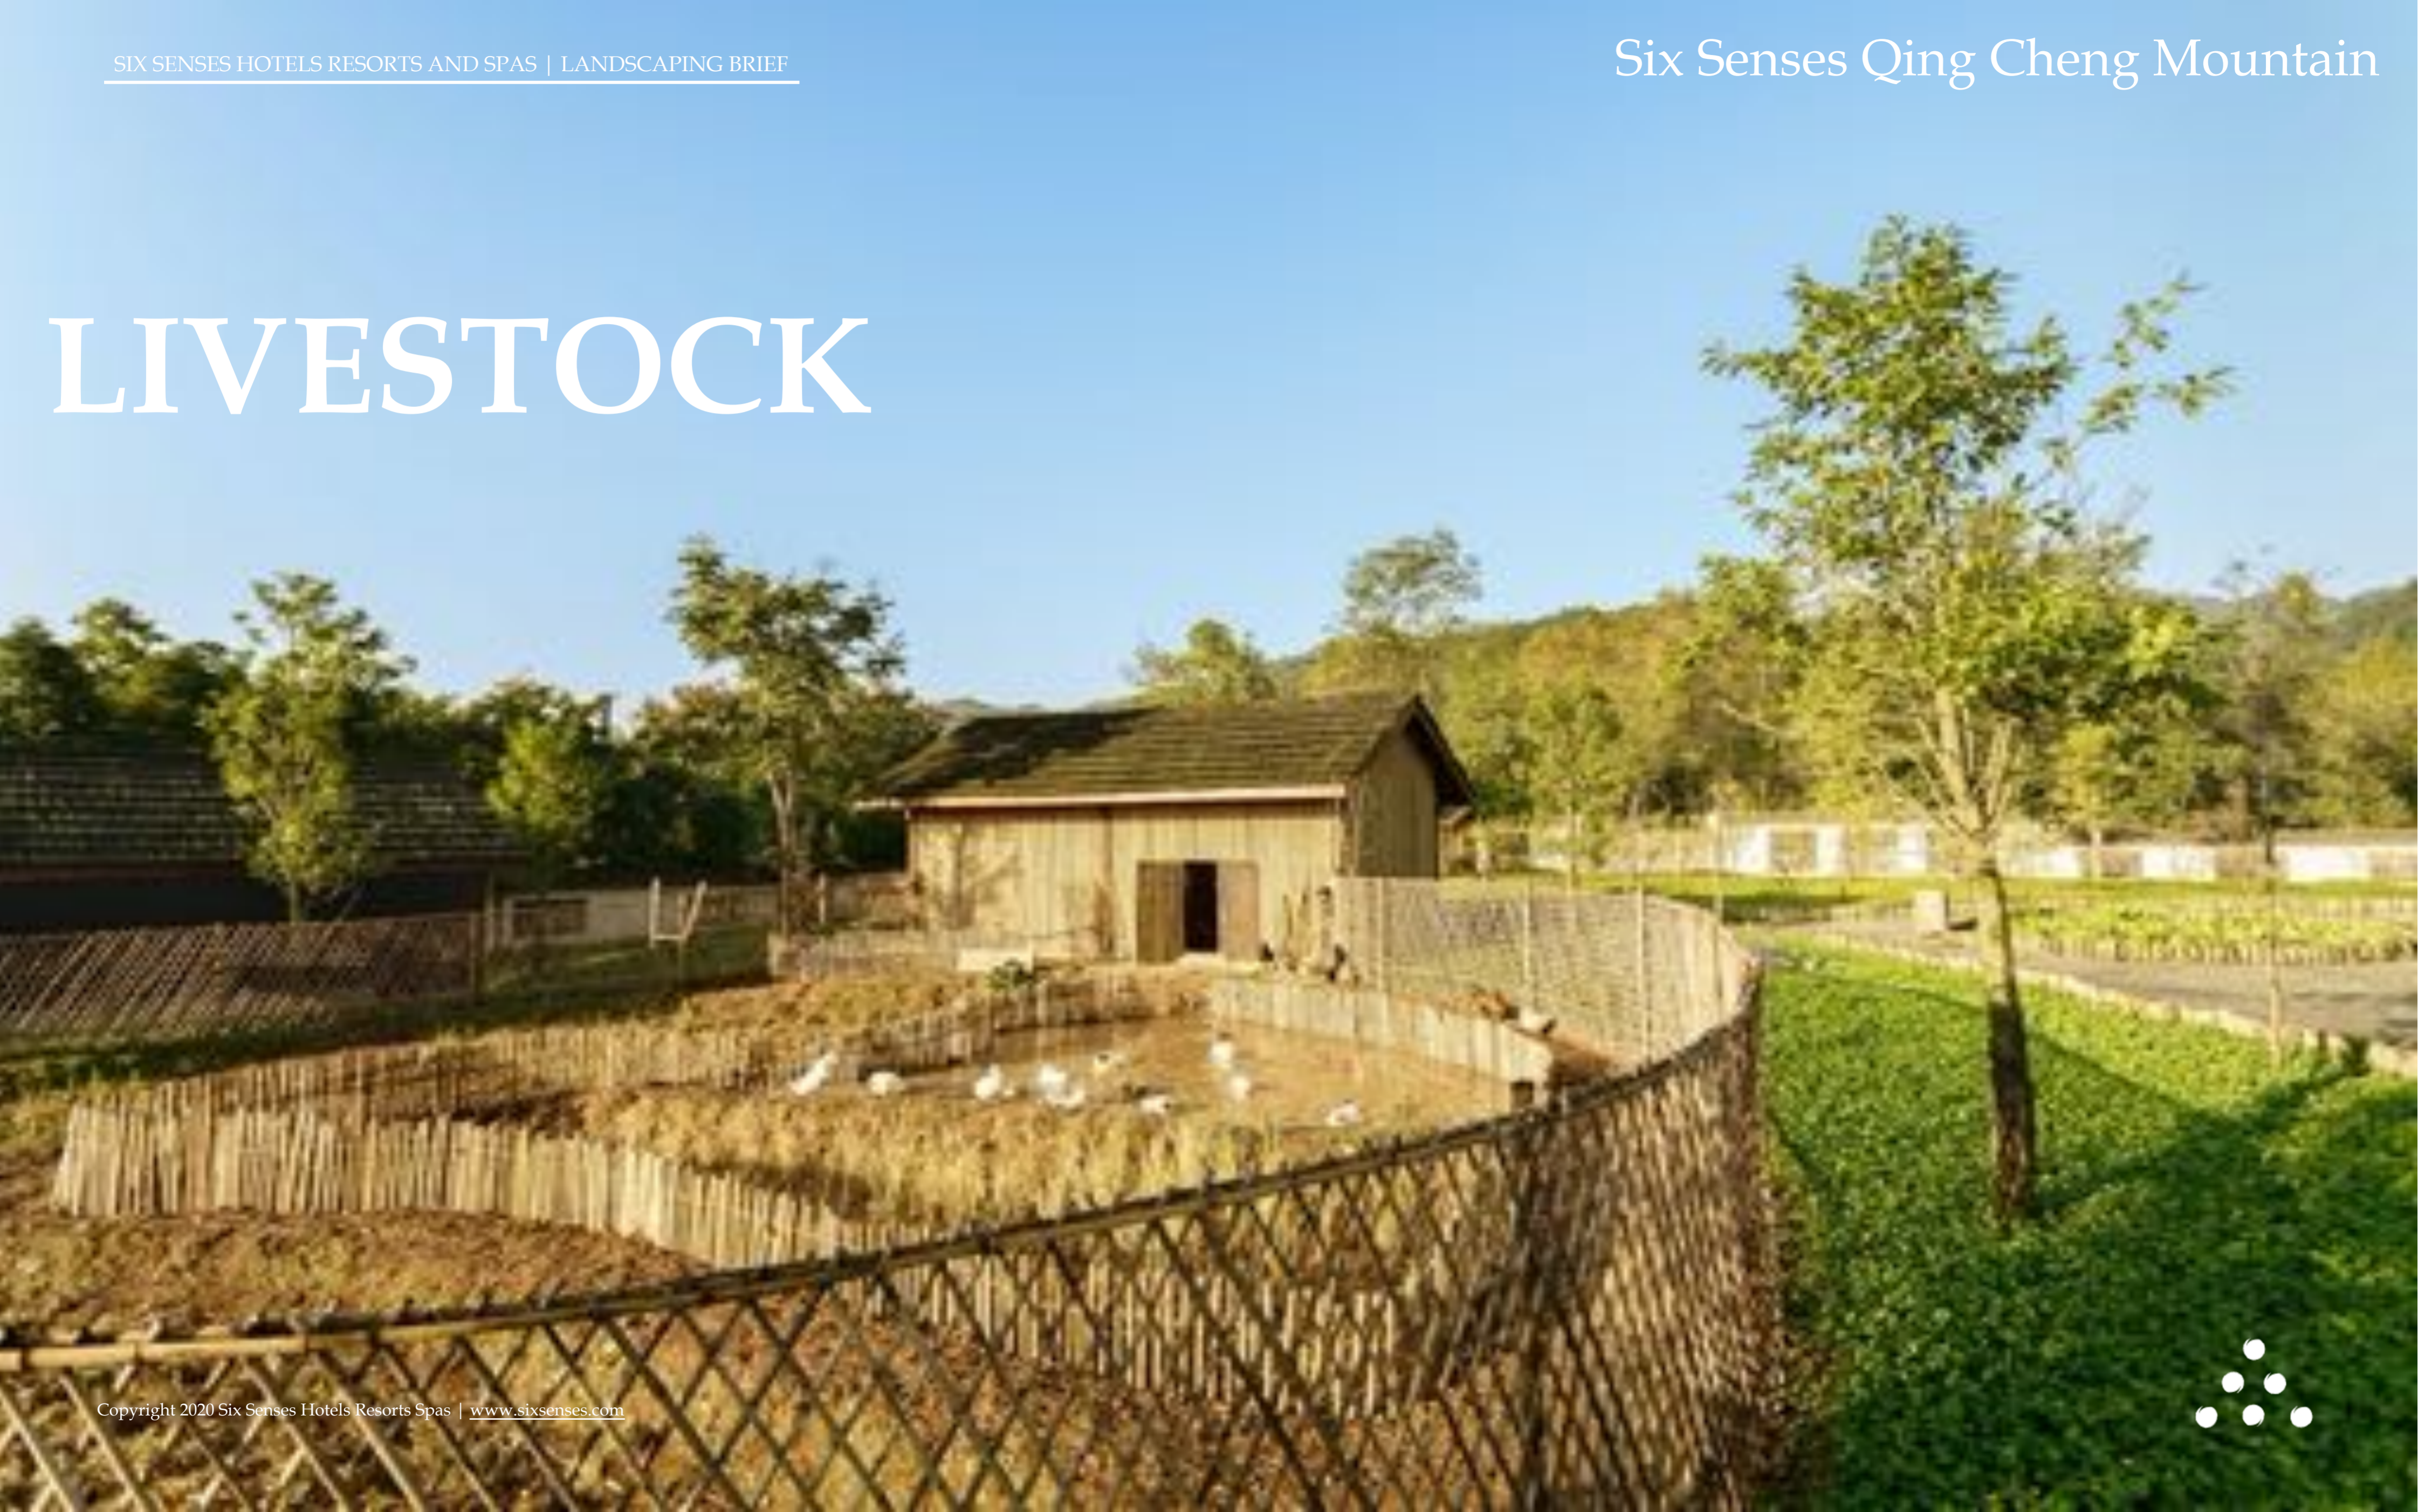

Efficient irrigation

Irrigation systems (dripping) are highly recommended to ensure maximum water use efficiency. Greywater is recycled and used to irrigate non-food plants in landscaping

LIVESTOCK

Five Freedoms from Humane Society International:

<https://www.hsi.org/wp-content/uploads/assets/pdfs/animal-welfare-guidelines-smallholder-livestock.pdf>

Cheese Production

We support in-house cheese production in areas where cheese is expensive, difficult to import, or when milk is produced from our livestock (goats, sheep, cows, etc.). Our cheese production facility is a great platform for education and workshops.
